

WhiteWater Super Flume Boat

Highly configurable and comfortable, the Super Flume boat from WhiteWater offers an all-new high-tech composite body with traditional theming or any other theming for your ride's particular narrative.

Unique Features and Benefits

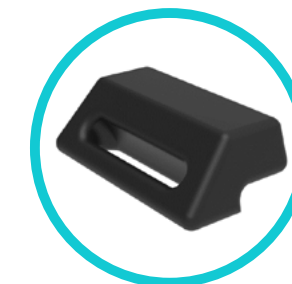

CORROSION RESISTANT

10 entry/exit handles made of stainless steel ensure durability and long-lasting corrosion resistance. $\frac{3}{4}$ -inch diameter tubing with textured grip gives a solid feel.

CUSHIONED COMFORT AND SAFETY

8 new dash pads have integrated grab bars encased in soft foam for comfortable bracing. These double as cushioned headrests for the rows ahead.

SOLID FOOTING AT ENTRY/EXIT

8 step plates with textured grip material provide solid footing at each entryway.

EASY MAINTENANCE ACCESS

The all-new flooring has a non-slip micro-texture and is made from marine-standard polyethylene. The flooring is arranged in 8 easily removable panels for quick maintenance access.

QUIET OPERATION

A new anti-roll back design reduces the noise of the boat going up lift hills.

PRECISION-BUILT TO LAST

4 wheel brackets precision machined from solid marine-grade aluminum are coated with a military spec anti-corrosion layer. Sacrificial anodes electrically grounded to every component provide additional galvanic protection.

Super Flume Lap Bar Options

Common Ratcheting Bar

COMMON COMFORT

Single padded bar provides comfort for both riders.

TRADITIONAL AND RELIABLE

One simple bar secures both riders. The position is locked in discrete increments using a mechanical system.

Individual Hydraulic Bars

FAMILY-FRIENDLY HAND HOLDS

2 convenient grips for smaller hands to hold and self-soothe during scary moments.

CUSTOMIZABLE COMFORT

Each rider is provided with a bar that adjusts individually. This means both large and small bodies can safely share a seat together.

PERFECT POSITION EVERY TIME

The hydraulic locking feature can engage in any position, allowing each bar to fit perfectly to every rider.

ERGONOMIC PADDING

Curved lap bar pads provide form-fitting comfort.

LAYERS OF SAFETY

2 hydraulic cylinders per seat can be used for applications or jurisdictions that require redundancy.

EASY MAINTENANCE

Removable covers allow for quick access to the pivot mechanism for inspection and repair.

SINGLE RIDER SAFETY

Integrated knee restraint effectively secures single riders.
